                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A.Accession: JT0752
A.Molecule type: mRNA
A.Residues: 1-106, "K',108-255 <SCH>
A.Stesidues: 1-106, "K',108-255 <SCH>
C.Comment: This protein belongs to a member of the human nerve-growth-factor/tumor-neord
C.Comment: This protein belongs to a member of the human nerve-growth-factor/tumor-neord
C.Comment: This receptor recongnizes soluble, cell-surface bound or extracellular matrix
C.Superfamily: CD27 antiquen, NGF receptor repeat homology
C.Keywords: glycoprotein; phosphorotein; receptor; transmembrane protein
F:117/Domain: signal sequence #status predicted <SIG>
F:18-255/Product: lymphocyte activation-induced receptor ILA #status predicted <NAT>
F:187-213/Domain: transmembrane #status predicted <TWN>
F:187-213/Domain: carbohydrate (Asn) (covalent) #status predicted
F:234,235/Binding site: phosphate (Thr) (covalent) (by protein kinase II) #status predicted
C; Date: 29-May-1998 #sequence_revision 29-May-1998 #text_change 11-Jan-2000
C; Accession: 137552

BLOPHYS. RES. COMMUN. 187:934-939(1992).

-1- FUNCTION: THIS RECEPTOR BINDS INSULIN-LIKE GROWTH FACTOR I (IGF I)
WITH A HIGH AFFINITY AND IGE II WITH A LOWER AFFINITY. IT HAS A
TYROSINE-PROTEIN KINASE ACTIVITY.

-1- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP +
PROTEIN TYROSINE PHOSPHATE.

-1- SUBGNIT: TETRAMER OF 2 AAPHA AND 2 BETA CHAINS LINKED BY DISULFIDE
BONDS. THE ALPHA CHAINS CONTRIBUTE TO THE FORMATION OF THE LIGAND-
BINDING DOMAIN, HHILE THE BETA CHAIN CARRIES THE KINASE DOMAIN.

-1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
                                                                                             Rattus norvegicus (Rat).
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Rattus.

REAL ILSSUES AND CELLS VIA A HIGH AFFINITY RECEPTOR. LAMININ

RECEIN INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING

TELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING

WITH OTHER EXTRACELLULAR MATRIX COMPONENTS.

- SUBUNIT: LAMININ IS A COMPLEX GLYCOPROPIEN, CONSISTING OF THREE

- DIFFERENT POLYPEPTIDE CHAINS (ALCHA, BETA, GAMMA), WHICH ARE BOUND

COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT BACH END.

THE BETA -2 CHAIN IS A SUBUNIT OF LAMININ), LAMININ-4

(S-MEROSIN), AND LAMININ-7 (KS-LAMININ).

- TISSUE SPECIFICITY: FOUND IN THE SYNAPTIC

COMPONENT OF THE NUMBER OF LAMININ IN THE SYNAPTIC

COMPONENT OF THE NUMBER OF LAMININ IN THE SYNAPTIC

CONTROLLED OF THE NUMBER OF LAMININ IN THE SYNAPTIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.               DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.
DOMAIN: DOMAINS VI AND IV ARE GLOBULAR.
SIMILARITY: CONTAINS I LAMININ N-TERMINAL DOMAIN (DOMAIN VI).
SIMILARITY: CONTAINS 12.5 LAMININ EGF-LIKE DOMAINS.
SIMILARITY: CONTAINS 1 LAMININ DOMAIN IV.
                                                                                                                                                                                                                                                                                                                                                                                            Glycoprotein; Basement membrane; Extracellular matrix; Colled coll; Laminin EGF-like domain; Cell adhesion; Repeat; Signal.

-- FUNCTION: RECEPTOR FOR THE OX40L/GD34 CYTOKINE.
-- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-- TISSUE SPECIFICITY: ACTIVATED T-CELLS.
-- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

Eur. J. Immunol. 25:926-930(1995).

-- FUNCTION: RECEPTOR FOR THE OX40L/GP34 CYTOKINE.

-- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                                                                                                                                         Mus musculus (Mouse).

Accession: JT0752
A. Molecule type: mRNA
C. Comment: This protein belongs to a member of the human nerve-growth-factor/tumor-necro
C. Comment: This receptor recoptor repeat homology
C. Superfamily: CD27 antigen; NGF receptor repeat homology
C. Superfamily: CD27 antigen; NGF receptor receptor; transmembrane protein
F. 1-17/Domain: signal sequence #status predicted <SIG>
F. 18-255/Product: lymphocyte activation-induced receptor ILA #status predicted <MAT>
F. 18-255/Product: lymphocyte activation-induced receptor ILA #status predicted <MAT>
F. 18-255/Product it ransmembrane #status predicted <ANN
F. 13-255/Binding site: phosphate (Thr) (covalent). (by casein kinase II) #status predicted
F. 242/Binding site: phosphate (Ser) (covalent) (by protein kinase II) #status predicted

WITH OTHER EXTRACELLULAR MATRIX COMPONENTS.
FUNCTION: ALPHA-5 CHAIN MAY BE THE MAJOR LAMININ ALPHA CHAIN OF
ADULT EPITHELIAL AND/OR ENDOTHELIAL BASAL LAMINAE.
SUBBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE
DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WHICH ARE BOUND
TO EACH OTHER BY DISULFIDE BONDS INTO A CROSS-SHAPED MOLECULE
COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END.
SUBCELLULAR LOCATION: EXTRACELLULAR; FOUND IN THE BASEMENT
                                                                                                                                                                                          MEMBRANDS (MAJOR COMPONIT).

-1 TISSUE SPECIFICITY: IN ADULT, HIGH LEVELS IN HEART, LUNG, AND KINDEY; LOWRE IN BRAIN, MUSCLE AND TESTIES; VERY LOW IN LIVER, GUT AND SKIN. EXPRESSED IN MANY TISSUES IN EMBRYONIC DAY 11.

-1 DOMAIN: THE ALPHA HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COLLED COIL STRUCTURE.

-1 DOMAIN: DOMAINS VI, IV AND G ARE GLOBULAR.
-1 SIMILARITY: CONTAINS 1 LAMININ DEF-LIKE DOMAINS.
-1 SIMILARITY: CONTAINS 2 LAMININ DEF-LIKE DOMAINS.
-1 SIMILARITY: CONTAINS 5 LAMININ GF-LIKE DOMAINS.
-1 SIMILARITY: ALPHA -5 CHANIN S DOMAINS IV.
-1 SIMILARITY: ALPHA -5 CHANIN S MORE RELAFED TO DROSOPHILA ALPHA CHAIN THAN TO MAMMALIAN ALPHA CHAINS 1-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LAMININ EGF-LIKE 12.

- FUNCTION: RECEPTOR FOR TWF-ALPHA.
-1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-1- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
                                                                                          Goodwin R.G., Anderson D., Jerzy R., Davis T., Brannan C.I., Copeland N.G., Jenkins N.A., Smith C.A.; Molecular cloning and expression of the type 1 and type 2 murine receptors for tumor necrosis factor."; Mol. -I- FUNCTION: RECEPPOR FOR TNF-ALPHA. HIGH AFFINITY FOR TNA-ALPHA AND APPROXIMATELY 5-FOLD LOWER AFFINITY FOR THE BETA.

-I- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I- PTM: PHOSPHORYLATED; MINLY ON SERINE RESIDUES WITH A VERY LOW LEVEL ON THREONINE RESIDUES.

-I- PTM: PHOSPHORYLATED; MINLY ON SERINE RESIDUES WITH A VERY LOW LEVEL ON THREONINE RESIDUES.

-I- PTM: PHOSPHORYLATED: ON THE SIDUES.

-I- PTM: PAYERST): USED TO TREAT MODERATE TO SERVERE RHEUMATOID ARTHRITIS (RA). ENBREL CONSIST OF THE EXTRACELLULAR LIGAND-BINDING PORTION OF THFR 2 LINKED TO AN IMMUGLOBULIN FC CHAIN. IT BINDS TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-93016040; PubMed-1328224; Pennica D., Lam V.T., Mize N.K., Weber R.F., Lewis M., Fendly B.M., Liparl M.T., Goeddel D.V.; "Blochemical properties of the 75-kDa tumor necrosis factor receptor. "INTERIOR TO MEDIATE THE ATTACHMENT, MIGRATION, & ORGANIZATION OF CELLS INTO TISSUES DURING EMBYONIC DEVELOPMENT & ORGANIZATION OF CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING WITH OTHER EXTRACELLULAR MATRIX COMPONENTS.

-I- SUBUNIT: LAMININ IS A COMPLEX GLYCOPROTEIN, CONSISTING OF THREE DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, GAMMA), WHICH ARE BOUND TO EACH OTHER BY DISULFIDE BONDS INTO A CROSS-SHAPED MOLECULE COMPRISING ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH END. THE BETA-2 CHAIN IS A SUBUNIT OF LAMININ-3 (S-LAMININ), LAMININ-4 (S-MEROSIN), AND LAMININ-7 (KS-LAMININ).

-I- SUBCELLULAR LOCATION: EXTRACELLULAR.

COMPONENT), S-LAMININ IS CONCENTRATED IN THE SYNAPTIC COMPONENT), S-LAMININ IS CONCENTRATED IN THE SYNAPTIC

CLEFT OF THE NEUROMOSCULAR JUNCTION.

-I- DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT WITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.
                                                                                                                                                                                                           5

--- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
--- TISSUE SPECIFICITY: EXPRESSED ON THE SURFACE OF ACTIVATED T-CELLS.
--- INDUCTION: OPTIMAL BY PMA AND IONOMYCIN.
--- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.
